Clinicians Live: New Opportunities to Reduce Residual Risk Beyond Statin Therapy

MAY 16, 2019 | Turnberry Isle Miami | Aventura, FL

AGENDA

6:45 PM	Registration and Buffet Dinner
7:00 PM	Program Overview *Sergio Fazio, MD, PhD, Chair*
7:10 PM	REDUCE-IT and Other Omega-3 Trials *Michael Miller, MD*
7:25 PM	Biologic Basis for EPA Modulation in Reducing ASCVD Events Seen in REDUCE-IT *R. Preston Mason, PhD*
7:40 PM	Clinician Live Discussion *All Faculty*
7:55 PM	Q&A with the Audience *Faculty and Participants*
8:10 PM	Challenging Cases for Discussion *Faculty and Participants*
8:25 PM	Closing Comments *Sergio Fazio, MD, PhD, Chair*
8:30 PM	Adjourn

Faculty slides are available online: medtelligence.net/may16

OBJECTIVES & ACCREDITATION

PROGRAM OVERVIEW

This innovative and engaging symposium will provide in-depth coverage of key issues and guidelines surrounding the management of CV risk beyond statin therapy. Prominent, internationally known faculty will highlight relevant clinical pearls to improve patient management and clinical outcomes.

ACTIVITY TYPE

Live

TARGET AUDIENCE

This activity is designed to meet the needs of lipidologist, internists, endocrinologists, physician assistants, pharmacists, registered nurses, nurse practitioners, advance practice registered nurses and registered dietitians with an interest in lipid management.

LEARNING OBJECTIVES

At the Conclusion of this activity, participants should be able to:

- Discuss the results and importance of REDUCE-IT and other recent cardiovascular outcomes trials that reduce ASCVD events beyond statin therapy.
- Describe the potential biologic basis for the reductions in ASCVD events observed in REDUCE-IT.
- Apply evidence-based trial evidence and guidelines to lifestyle and therapeutic approaches for managing patients with or at high risk of ASCVD events.
- Discuss strategies to improve the knowledge, skills or performance of the healthcare team.

CRITERIA FOR SUCCESS

Statements of credit will be awarded based on the participant's attendance and submission of the activity evaluation form. Partial credit may be awarded for ACPE credit. A statement of credit will be available upon completion of an online evaluation/claimed credit form at www.lipid.org/cme. The deadline to claim credit is **June 14, 2019**.

For Pharmacists: Upon receipt of the completed activity evaluation form, transcript information will be available at www.mycpemonitor.net within 4 weeks.

COMMERCIAL SUPPORT

This educational activity is supported by educational grants from Amarin Pharma Inc.

CREDIT DESIGNATION

JOINTLY ACCREDITED PROVIDER™
INTERPROFESSIONAL CONTINUING EDUCATION

CME credit provided by the National Lipid Association

In support of improving patient care, this activity has been planned and implemented by The National Lipid Association and Medtelligence. The National Lipid Association is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

Physician Credit Designation Statement

The National Lipid Association designates this live activity for a maximum of 1.50 *AMA PRA Category 1 Credits™*. Physicians should claim only credit commensurate with the extent of their participation in this activity.

Physician Assistants

NCCPA accepts *AMA PRA Category I Credit™* from organizations accredited by ACCME.

Dietitians

The National Lipid Association is a Continuing Professional Education (CPE) Accredited Provider with the Commission on Dietetic Registration (CDR). Registered dietitians (RDs) and dietetic technicians, registered (DTRs) will receive 1.50 continuing professional education units (CPEUs) for completion of this program/ materials. CDR Accredited Provider #NL002.

Pharmacist Accreditation Statement

Universal Activity Number – JA0007192-9999-19-011-L01-P (Application)
This Activity has been approved for 1.50 contact hour(s) (.150 CEUs) of the Accreditation Council for Pharmacy Education.

Nursing

The maximum number of hours awarded for this CE activity is 1.5 contact hours.

Pharmacotherapy contact hours for Advance Practice Registered Nurses to be determined on participant certificate.

CHAIR

Sergio Fazio, MD, PhD
William and Sonja Connor Chair of Preventive Cardiology
Professor of Medicine, Physiology & Pharmacology
Director, Center for Preventive Cardiology
Knight Cardiovascular Institute
Oregon Health & Science University
Portland, OR

FACULTY

R. Preston Mason, PhD
Cardiovascular Division, Brigham
and Women's Hospital
Harvard Medical School
Boston, MA
Scientific Director and Founder, Elucida Research
Beverly, MA

Michael Miller, MD
Professor of Cardiovascular Medicine,
Epidemiology & Public Health
University of Maryland School of Medicine
University of Maryland Medical Center
Baltimore, MD

Margo B. Minissian, PhD, ACNP
Research Scientist
Clinical Lipid Specialist
Cardiology Nurse Practitioner
Smidt Heart Institute
Barbra Streisand Women's Heart Center
Cedars-Sinai Medical Center
Los Angeles, CA

James A. Underberg, MD, MS
Clinical Lipidology
Clinical Assistant Professor of Medicine
NYU School of Medicine & NYU Center for Prevention of Cardiovascular Disease
Director, Bellevue Hospital Lipid Clinic
Immediate Past- President, National Lipid Association
New York, NY

DISCLOSURE OF UNLABELED USE AND INVESTIGATIONAL PRODUCTS
This educational activity may include discussion of uses of agents that are investigational and/or unapproved by the FDA. Please refer to the official prescribing information for each product for discussion of approved indications, contraindications, and warnings.

DISCLOSURE DECLARATION
It is the policy of NLA to ensure independence, balance, objectivity, scientific rigor, and integrity in all of its continuing education activities. Planners, faculty, reviewers, and staff have disclosed any financial relationships with commercial interests as defined by the ACCME**.**

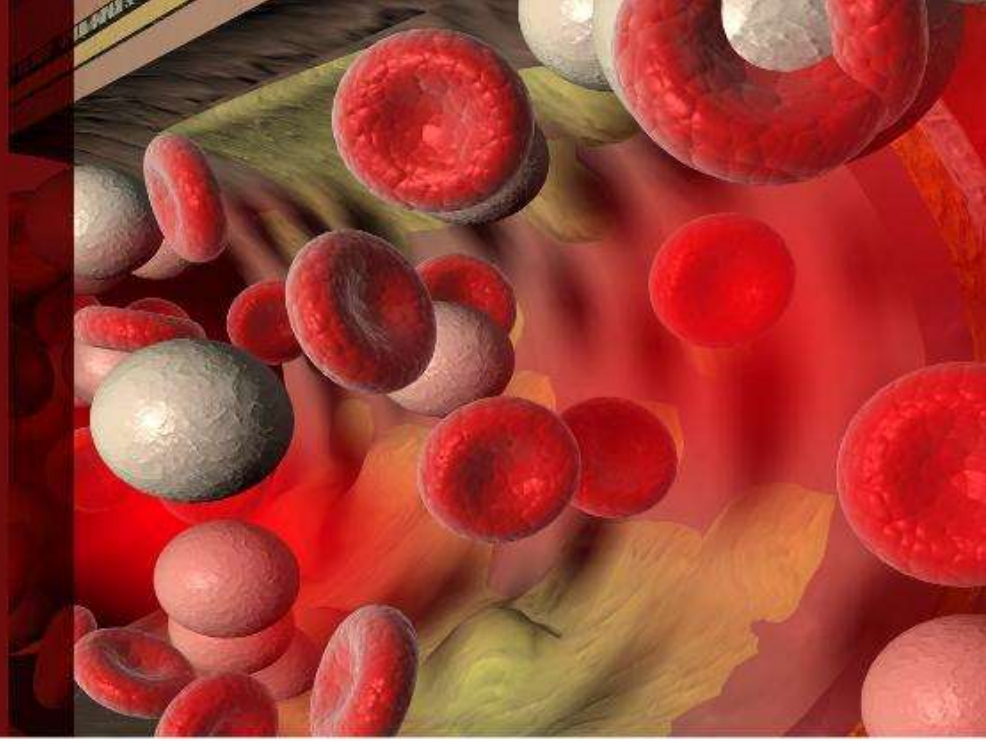
DISCLAIMER
This course is designed solely to provide the healthcare professional with information to assist in his/her practice and professional development and is not to be considered a diagnostic tool to replace professional advice or treatment. The course serves as a general guide to the healthcare professional, and therefore, cannot be considered as giving legal, nursing, medical, or other professional advice in specific cases. The NLA specifically disclaims responsibility for any adverse consequences resulting directly or indirectly from information in the course, for undetected error, or through reader's misunderstanding of content.

PERMISSIONS
The National Lipid Association acknowledges that permissions have been obtained for use of all copyrighted materials, including graphs, tables, pictures, and charts printed in this activity syllabus. Permissions have also been obtained from identifiable patients in photographs and other images, consistent with the DHHS HIPAA regulations for individual privacy.

FACULTY/PLANNER FINANCIAL DISCLOSURES

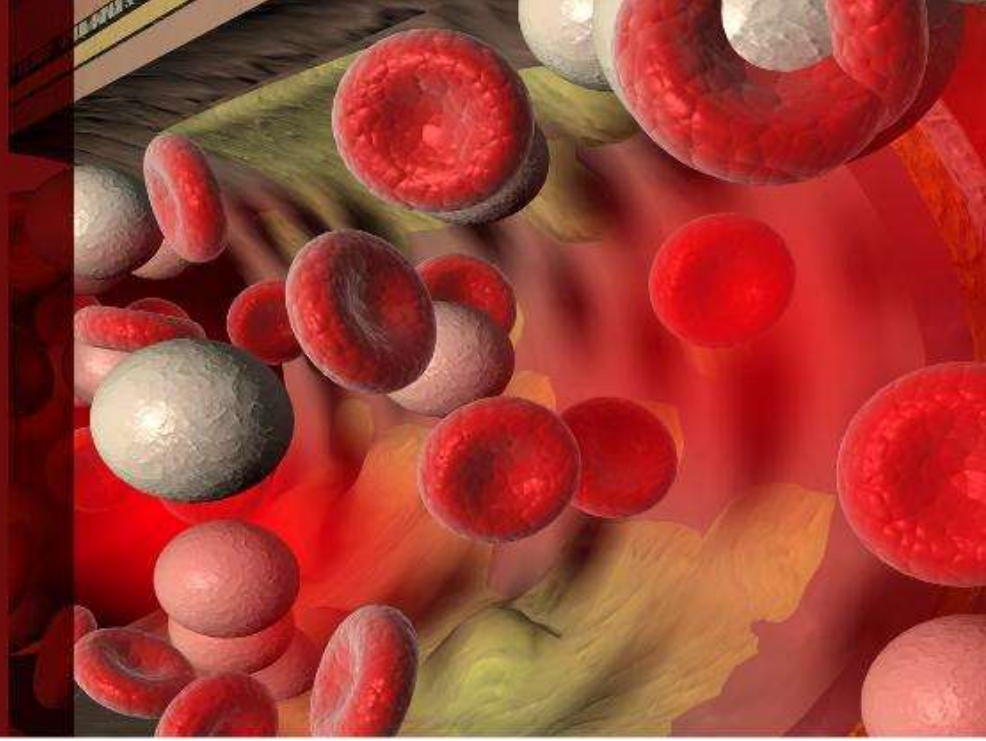
Name	Relationship	Company
Fazio, Sergio	Consultant	Amarin, Amgen, AstraZeneca, Esperion, Novartis
Mason, R. Preston	Contracted Research	Amarin, Amgen, ARCA Biopharma, Daiichi Sankyo, Pfizer
Miller, Michael	Consultant	Amarin
Minissian, Margo	Consultant	Amgen
Underberg, James	Advisory Board	Akcea, Alexion, Akcea, Ambry, Amgen, Regeneron, Sanofi
	Consultant	Amgen
	Contracted Research	Aegerion, Pfizer
	Speakers Bureau	Aegerion, Akcea, Alexion, Amarin, Amgen, Regeneron, Sanofi
STAFF/ REVIEWER DISCLOSURES		
NLA	N/A	NLA staff has nothing to disclose.
Medtelligence	N/A	Medtelligence staff has nothing to disclose.
Hemphill, Linda	Contracted Research	Akcea/Ionis, The Medicines Company, Regeneron
	Consultant	Akcea

This syllabus is not intended to be an exact representation of the faculty presentations.



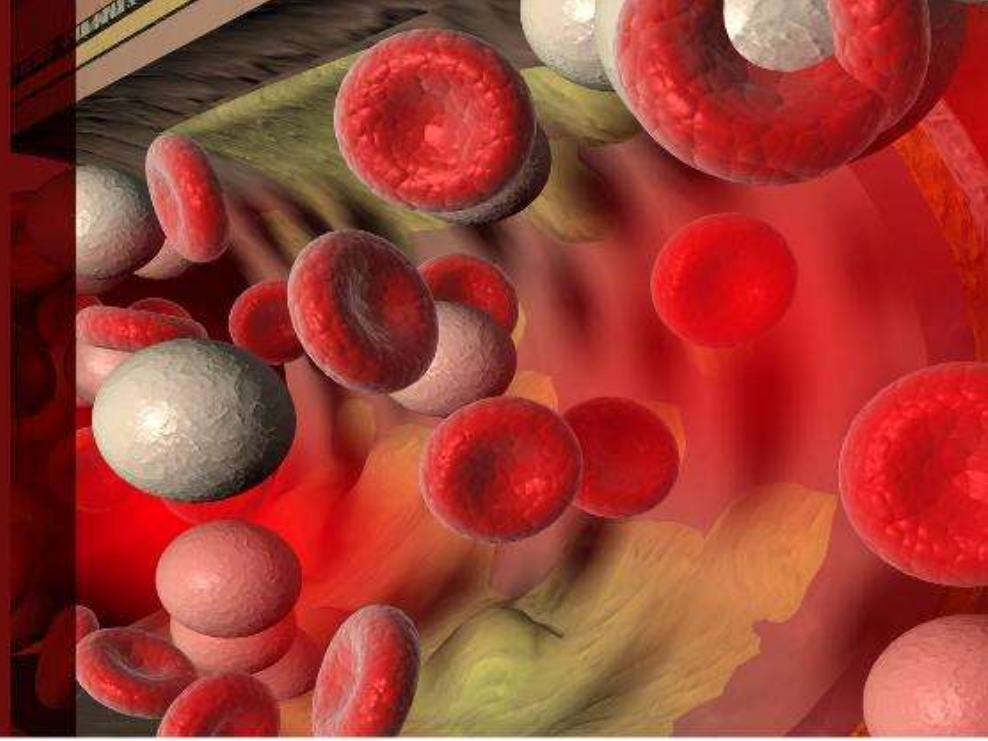
It is being provided as a useful reference that we encourage you to use during and after the activity.

Clinicians Live: New Opportunities to Reduce Residual Risk Beyond Statin Therapy



May 16, 2019

Opening Remarks

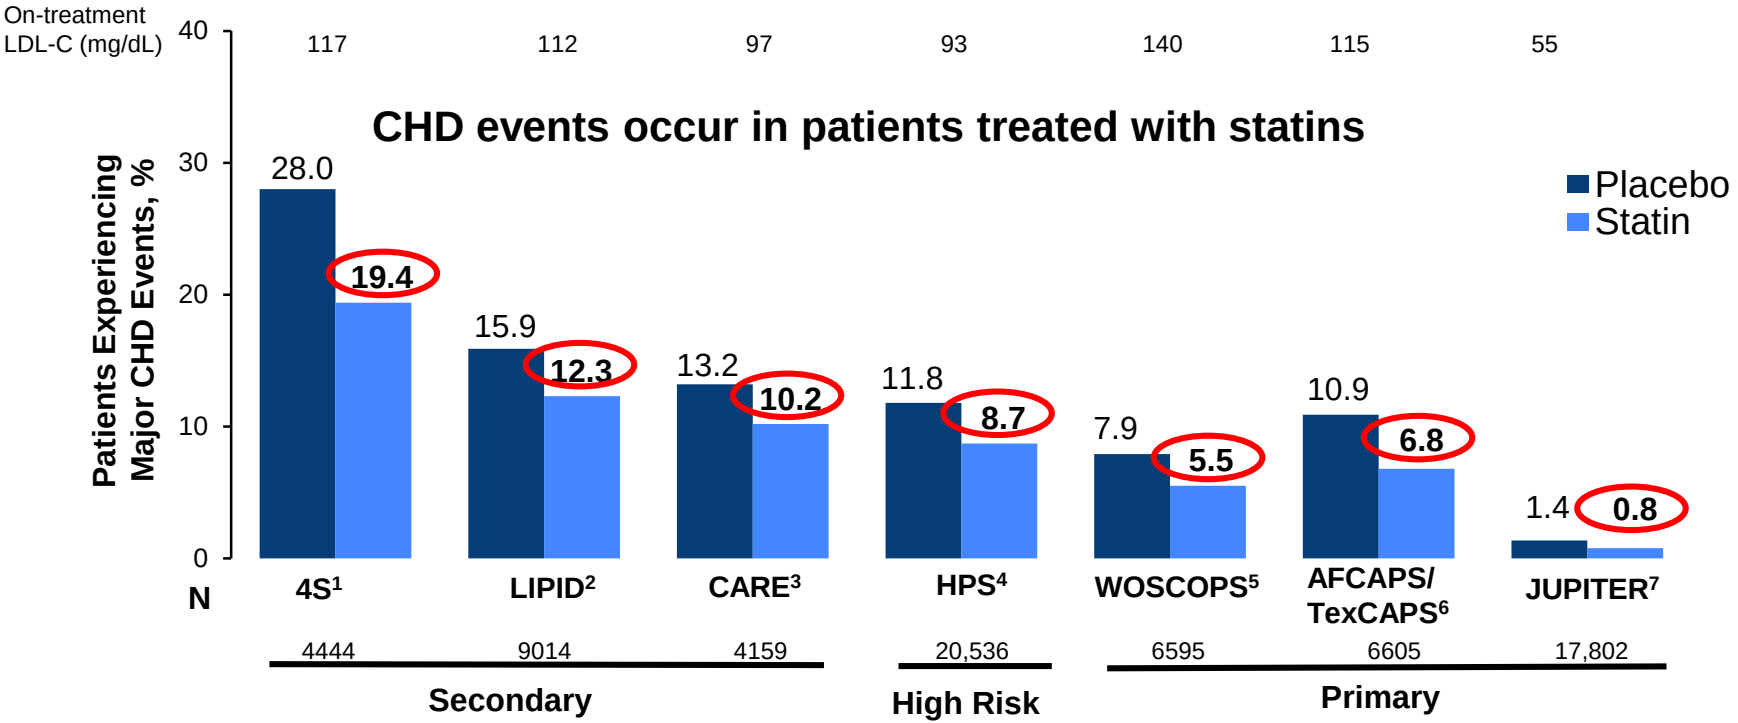


Sergio Fazio, MD, PhD
William and Sonja Connor Professor of Medicine
Director, Center for Preventive Cardiology
Knight Cardiovascular Institute
Oregon Health & Science University
Portland, OR

A 68-year-old gentleman with 30 years of continuous exposure to statin therapy and recent finding of calcified coronaries (Agatston 2450)

“I thought the statin was supposed to protect me”

Despite ASCVD Benefit with Statin Monotherapy, Substantial Residual CV Risk Remains



Residual CV risk may be due not only to other lipid measures that may not be controlled, but other risk factors at suboptimal control such as hypertension, diabetes, or smoking.

Mechanism-Based Statin-Adjunct Therapy for ASCVD Prevention

Prior ASCVD Event or High-Risk 1º Prevention: On Aggressive Statin MonoRx

Residual Risk Factors

↑Pro-atherogenic factor	Cholesterol	Inflammation	Thrombosis	Triglycerides	Lp(a)
Biomarker	LDL-C >100 mg/dL	hsCRP >2 mg/L	No established Biomarker	TG >135 mg/dL (HDL <40 mg/dL)	Lp(a) >50 mg/dL
Intervention	Ezetimibe or PCSK9i	Anti-Inflammatory (IL-inhibition)	Anti-coagulant or Anti-platelet	RX Omega-3 EPA (EPA+DHA, pemafibrate?)	Lp(a) ASO
Randomized Trial Evidence	IMPROVE-IT FOURIER SPIRE ODYSSEY	CANTOS (CIRT *negative*)	COMPASS PEGASUS	REDUCE-IT	Planned

REDUCE-IT?

ASO=antisense oligonucleotide.

After Ridker PM. *J Am Coll Cardiol*. 2018;72:3320-31.

This evening we will…..

- Discuss different approaches leading to additional CVD risk reduction in statin takers
- Evaluate the mechanisms by which EPA reduces CVD risk in high TG patients
- Compare EPA to other TG-lowering agents for CVD risk reduction
- Determine the value of additional LDL lowering vs use of EPA in patients with elevated residual risk
- Position the role of inflammation in CVD risk assessment and management

REDUCE-IT and Omega-3 Trials

Effects of n–3 Fatty Acid Supplements in Diabetes Mellitus

The ASCEND Study Collaborative Group*

ASCEND: A randomized trial of omega-3 fatty acids (fish oil) versus placebo for primary cardiovascular prevention in 15,480 patients with diabetes

Jane Armitage and Louise Bowman

on behalf of the ASCEND Study Collaborative Group

Funded by British Heart Foundation, UK Medical Research Council
and support from Abbott, Bayer, Mylan and Solvay
Designed, conducted and analysed independently of the funders
University of Oxford is the trial sponsor

ESC Congress
Munich 2018

British Heart Foundation

MRC Population Health Research Unit

University of Oxford

ASCEND Trial Design

Eligibility: Age ≥40 years; any DIABETES; no prior CV disease

Participants: 15,480 UK patients

Randomization: Omega-3 fatty acids 1 g capsule/day vs placebo
(and aspirin 100 mg daily vs placebo)

Follow-up: Mean 7.4 years; >99% complete for morbidity & mortality

Adherence: Average adherence to omega-3 capsules 77%

Streamlined methods: mail-based (questionnaires & study treatment);
no study clinics; 2x2 factorial design; highly cost-effective

ASCEND Study Collaborative Group. *Trials*. 2016;17:286 / *Am Heart J*. 2018;198:135-44.

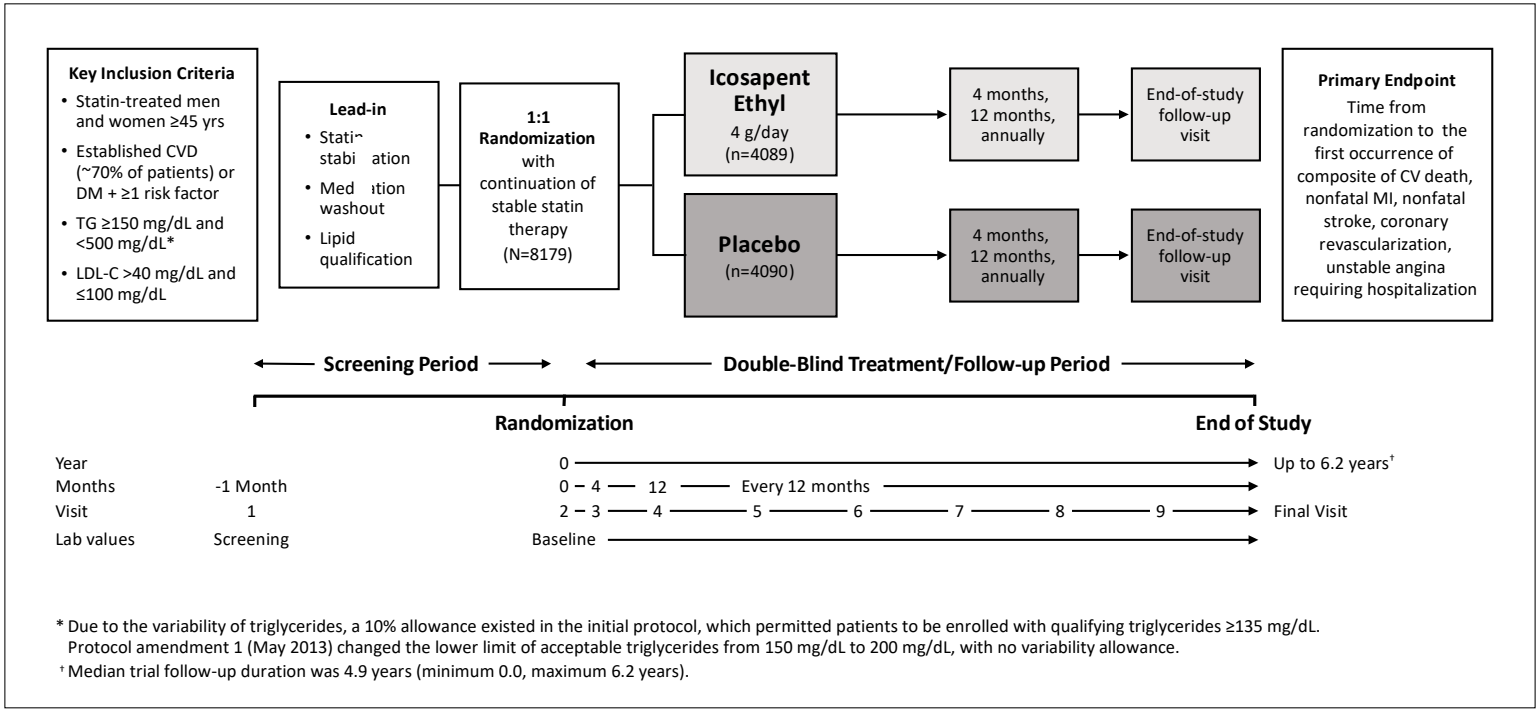
Cardiovascular Risk Reduction with Icosapent Ethyl for Hypertriglyceridemia

Deepak L. Bhatt, M.D., M.P.H., P. Gabriel Steg, M.D., Michael Miller, M.D., Eliot A. Brinton, M.D., Terry A. Jacobson, M.D., Steven B. Ketchum, Ph.D., Ralph T. Doyle, Jr., B.A., Rebecca A. Juliano, Ph.D., Lixia Jiao, Ph.D., Craig Granowitz, M.D., Ph.D., Jean-Claude Tardif, M.D., and Christie M. Ballantyne, M.D., for the REDUCE-IT Investigators*

REDUCE-IT Design



* Due to the variability of triglycerides, a 10% allowance existed in the initial protocol, which permitted patients to be enrolled with qualifying triglycerides ≥135 mg/dL. Protocol amendment 1 (May 2013) changed the lower limit of acceptable triglycerides from 150 mg/dL to 200 mg/dL, with no variability allowance.

† Median trial follow-up duration was 4.9 years (minimum 0.0, maximum 6.2 years).

Adapted from Bhatt DL et al. *Clin Cardiol*. 2017;40:138-48. REDUCE-IT ClinicalTrials.gov number, NCT01492361.

Key Inclusion Criteria – REDUCE-IT

1. Age ≥45 years with established CVD (Secondary Prevention Cohort) *or* ≥50 years with diabetes with ≥1 additional risk factor for CVD (Primary Prevention Cohort)

2. Fasting TG levels ≥150 mg/dL and <500 mg/dL*

3. LDL-C >40 mg/dL and ≤100 mg/dL and on stable statin therapy (± ezetimibe) for ≥4 weeks prior to qualifying measurements for randomization

*Due to the variability of triglycerides, a 10% allowance existing in the initial protocol, which permitted patients to be enrolled with qualifying triglycerides ≥135 mg/dL. protocol amendment 1 (May 2013) changed the lower limit of acceptable triglycerides from 150 mg/dL to 200 mg/dL, with no variability allowance.

Adapted from Bhatt DL et al. *Clin Cardiol*. 2017;40:138-48.

Key Exclusion Criteria

1. Severe (NYHA class IV) heart failure
2. Severe liver disease
3. History of pancreatitis
4. Hypersensitivity to fish and/or shellfish

Adapted from Bhatt DL et al. *Clin Cardiol*. 2017;40:138-48.

Key Baseline Characteristics

	Icosapent Ethyl (N=4089)	Placebo (N=4090)

REDUCE-IT Tertiary Endpoints:
Cardiac Arrest, Sudden Cardiac Death, Arrhythmias

Endpoint	Icosapent Ethyl n/N (%)	Placebo n/N (%)	Hazard Ratio (95% CI)
Cardiac Arrest	**22/4089 (0.5%)**	**42/4090 (1.0%)**	**0.52 (0.31, 0.86)**
Sudden Cardiac Death	**61/4089 (1.5%)**	**87/4090 (2.1%)**	**0.69 (0.50, 0.96)**
Cardiac Arrhythmias Requiring Hospitalization of ≥ 24 Hours	188/4089 (4.6%)	154/4090 (3.8%)	1.21 (0.97, 1.49)

Bhatt DL et al. *N Engl J Med*. 2019; 380:11-22.

REDUCE-IT Tertiary Endpoints: Revascularization

Revascularization Endpoint	Icosapent Ethyl n/N (%)	Placebo n/N (%)	Hazard Ratio (95% CI)
Coronary	**376/4089 (9.2%)**	**544/4090 (13.3%)**	**0.66 (0.58, 0.76)**
Emergency	**41/4089 (1.0%)**	**65/4090 (1.6%)**	**0.62 (0.42, 0.92)**
Urgent	**181/4089 (4.4%)**	**268/4090 (6.6%)**	**0.66 (0.54, 0.79)**
Elective	**194/4089 (4.7%)**	**278/4090 (6.8%)**	**0.68 (0.57, 0.82)**
Carotid Revascularization	31/4089 (0.8%)	26/4090 (0.6%)	1.18 (0.70, 1.98)
Salvage Revascularization	0/4089 (0.0%)	2/4090 (0.0%)	0.00 (0.00, -)

Bhatt DL et al. *N Engl J Med*. 2019; 380:11-22.

Treatment-emergent Adverse Event of Interest: Serious Bleeding

	Icosapent Ethyl (N=4089)	Placebo (N=4090)	P-value
Bleeding related disorders	111 (2.7%)	85 (2.1%)	0.06
Gastrointestinal bleeding	62 (1.5%)	47 (1.1%)	0.15
Central nervous system bleeding	14 (0.3%)	10 (0.2%)	0.42
Other bleeding	41 (1.0%)	30 (0.7%)	0.19

- No fatal bleeding events in either group
- Adjudicated hemorrhagic stroke - no significant difference between treatments (13 icosapent ethyl vs 10 placebo; P=0.55)

Bhatt DL et al. *N Engl J Med*. 2019; 380:11-22.

Adjudicated Events: Hospitalization for Atrial Fibrillation or Atrial Flutter

Primary System Organ Class Preferred Term	Icosapent Ethyl (N=4089)	Placebo (N=4090)	P-value
Positively Adjudicated Atrial Fibrillation/Flutter[1]	127 (3.1%)	84 (2.1%)	0.004

Note: Percentages are based on the number of subjects randomized to each treatment group in the Safety population (N).
All adverse events are coded using the Medical Dictionary for Regulatory Activities (MedDRA Version 20.1).
[1] Includes positively adjudicated Atrial Fibrillation/Flutter clinical events by the Clinical Endpoint Committee (CEC). P value was based on stratified log-rank test.

Bhatt DL et al. *N Engl J Med*. 2019; 380:11-22.

Conclusions

Compared with placebo, icosapent ethyl 4 g/day significantly reduced important CV events by **25%**, including:

- **20%** reduction in death due to cardiovascular causes
- **31%** reduction in heart attack
- **28%** reduction in stroke

Low rate of adverse effects, including:

- Small but significant increase in atrial fibrillation/flutter
- Non-statistically significant increase in serious bleeding

Consistent efficacy across multiple subgroups

- Including baseline triglycerides from 135-500 mg/dL
- Including secondary and primary prevention cohorts

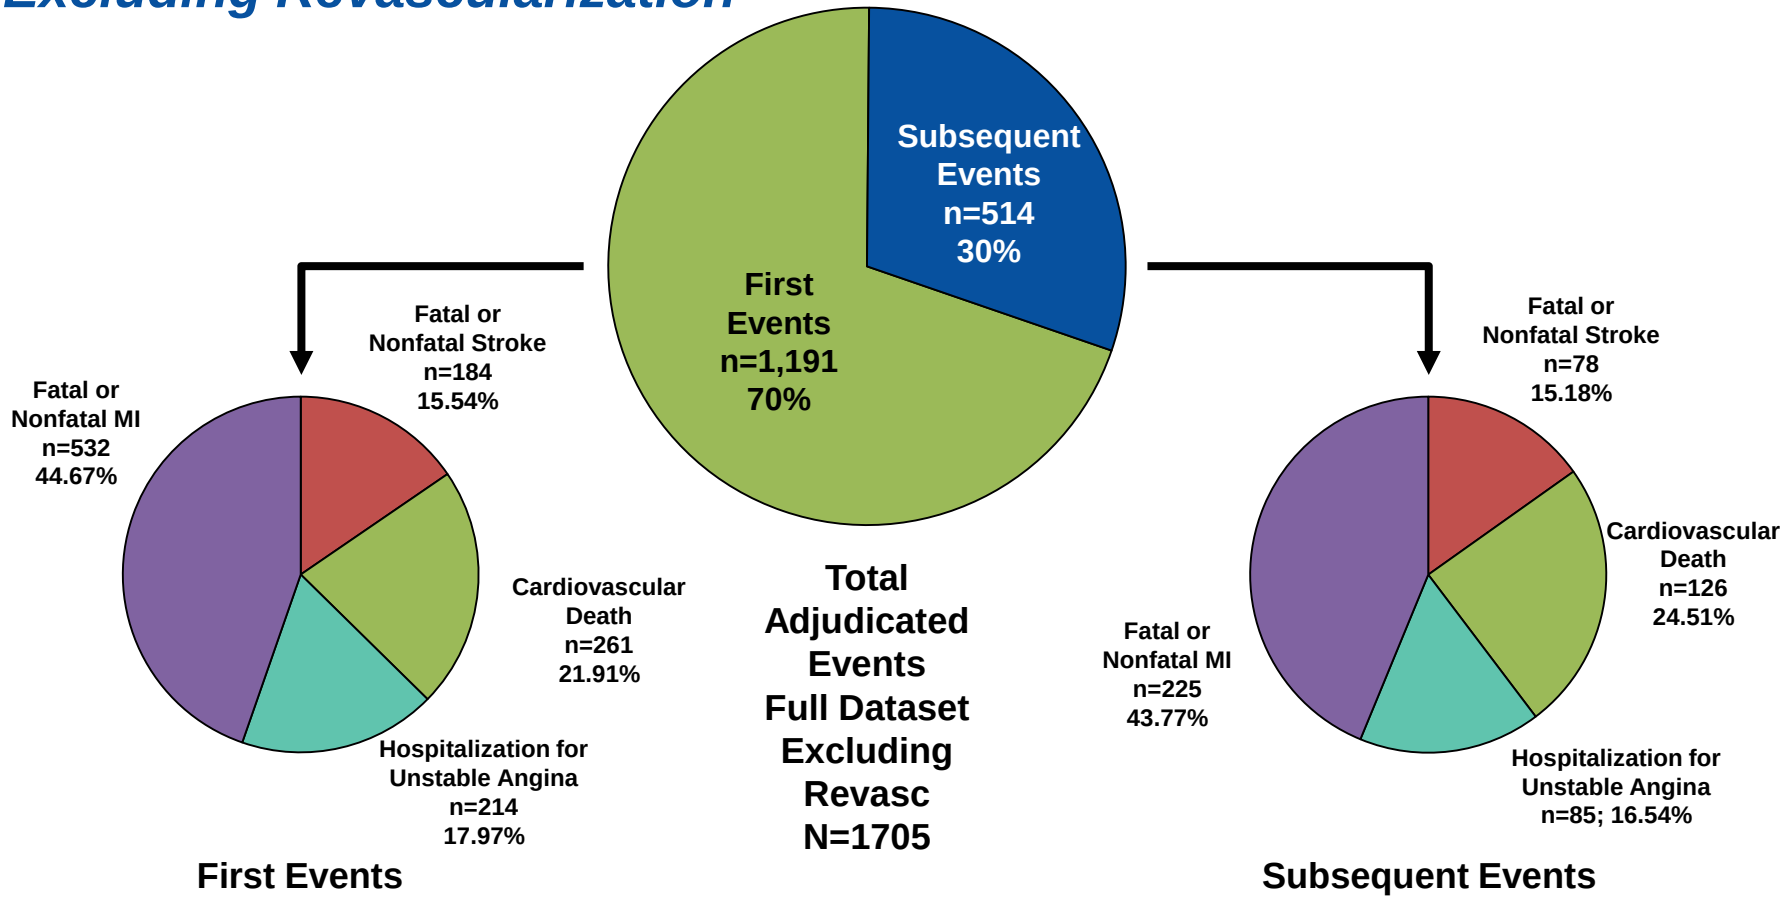
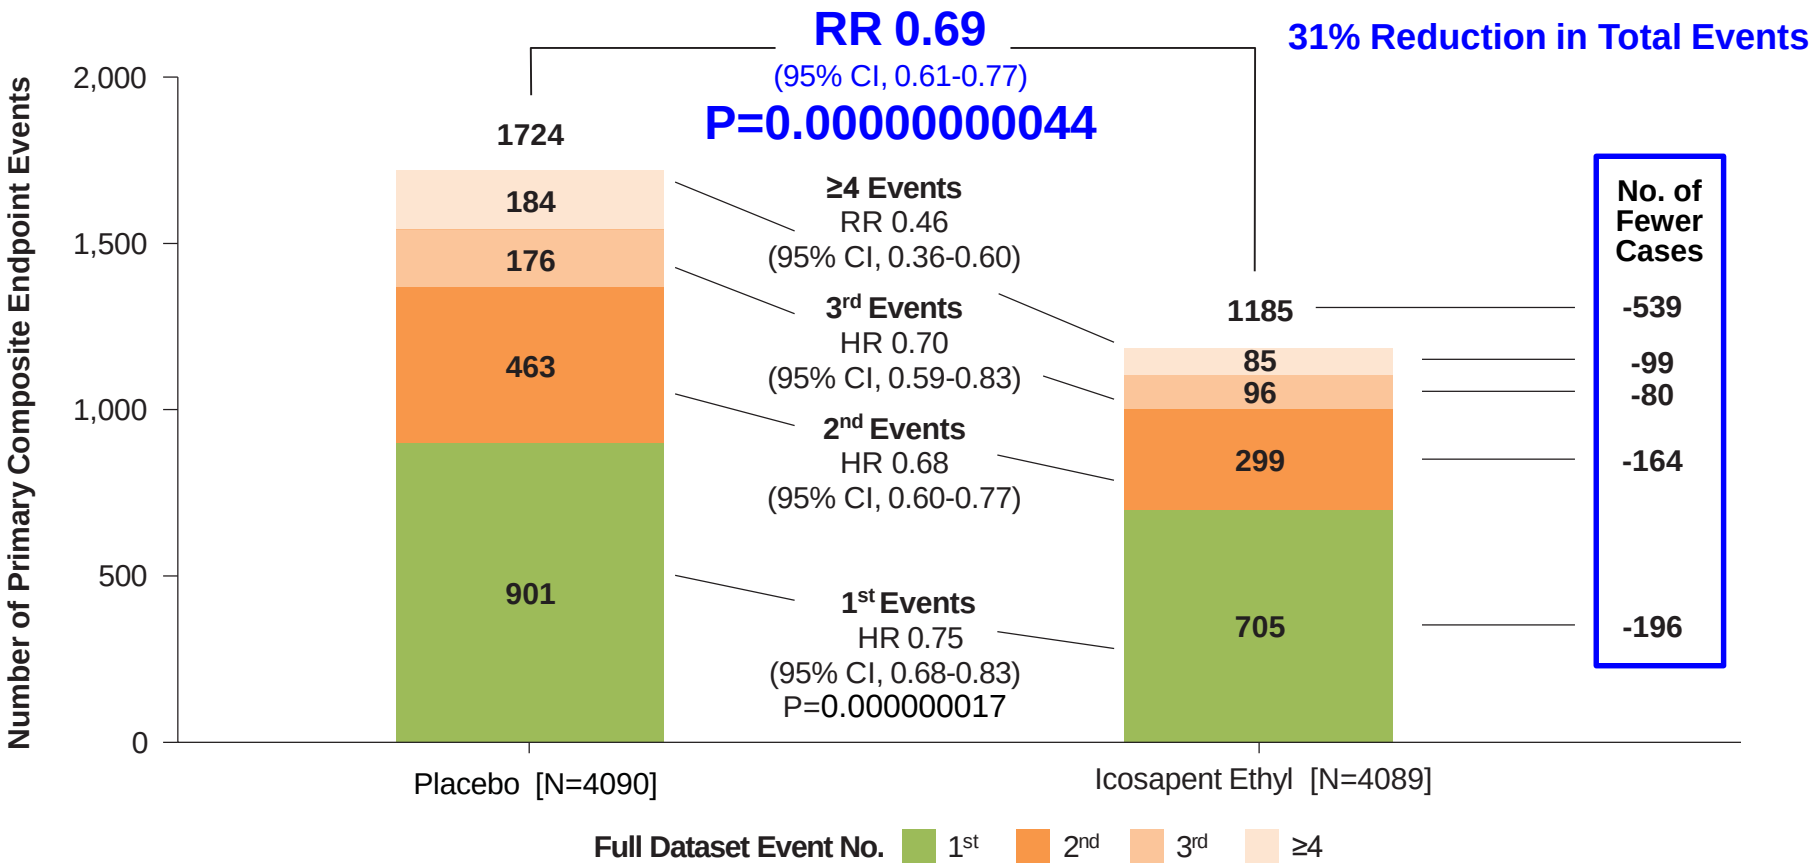
Proportions of First and Subsequent Events

Excluding Revascularization



First and Subsequent Events – Full Data



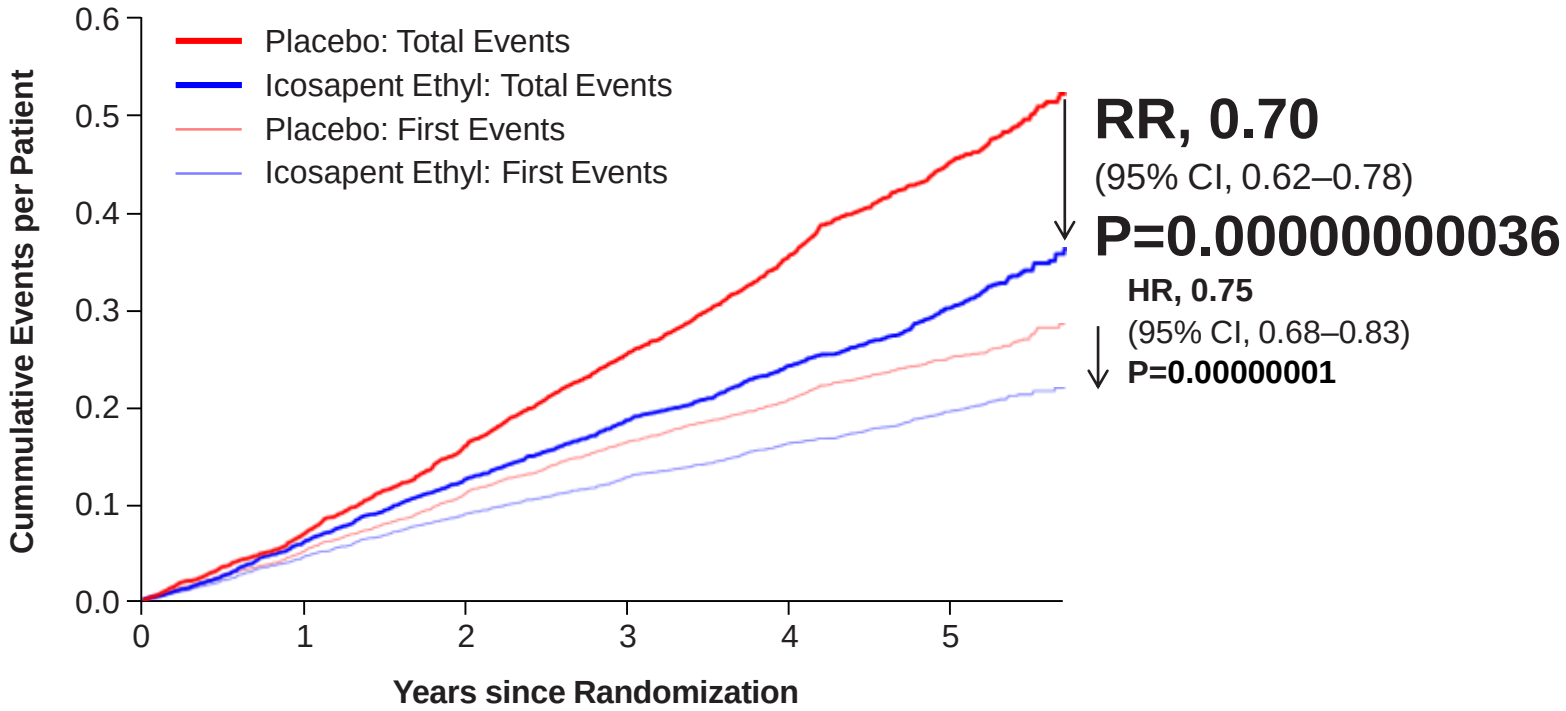
Bhatt DL et al. *J Am Coll Cardiol*. 2019;Mar 18(Epub ahead of print).

Note: WLW method for the 1st events, 2nd events, and 3rd events categories; Negative binomial model for ≥4th events and overall treatment comparison.

Total (First and Subsequent) Events

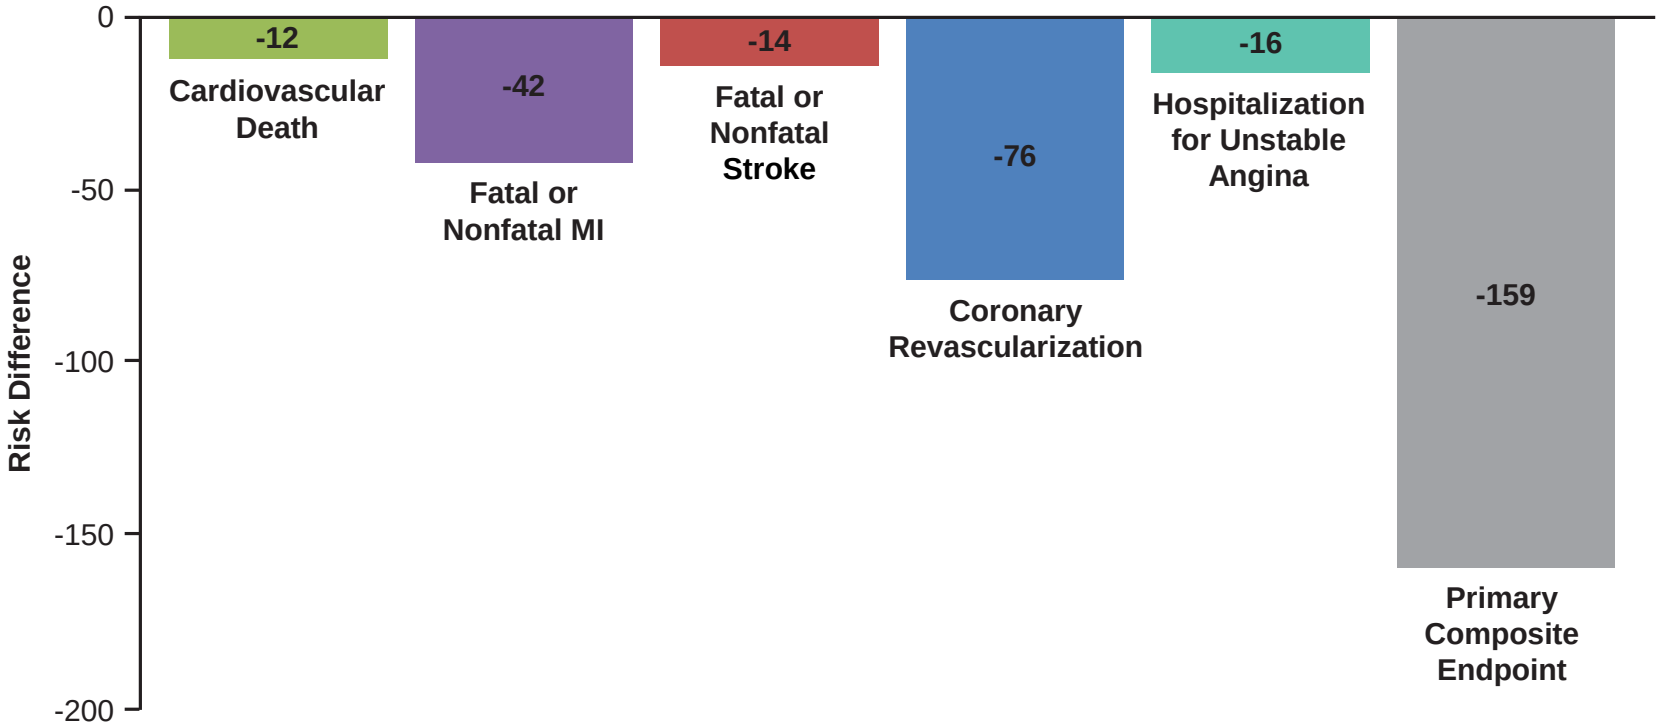
Primary: CV Death, MI, Stroke, Coronary Revasc, Unstable Angina

Primary Composite Endpoint



Bhatt DL et al. *J Am Coll Cardiol*. 2019;Mar 18(Epub ahead of print).

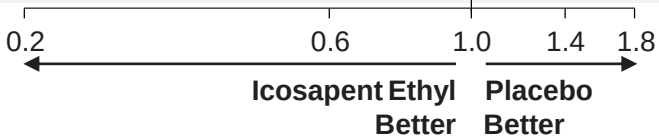
For Every 1000 Patients Treated with Icosapent Ethyl for 5 Years:



Bhatt DL et al. *J Am Coll Cardiol*. 2019;Mar 18(Epub ahead of print).

Primary Composite Endpoint: Total Endpoint Events by Baseline TG Tertiles

TOTAL EVENTS – Primary Composite Endpoint/Subgroup	Icosapent Ethyl	Placebo	RR (95% CI)	P-value
	Rate per 1000 Patient Years	Rate per 1000 Patient Years		
Primary Composite Endpoint (ITT)	61.1	88.8	0.70 (0.62–0.78)	<0.0001
Baseline Triglycerides by Tertiles*				
≥81 to ≤190 mg/dL	56.4	74.5	0.74 (0.61–0.90)	0.0025
>190 to ≤250 mg/dL	63.2	86.8	0.77 (0.63–0.95)	0.0120
>250 to ≤1401 mg/dL	64.4	107.4	0.60 (0.50–0.73)	<0.0001



***P (interaction) = 0.17**

Bhatt DL. ACC 2019, New Orleans.

Conclusions

Compared with placebo, icosapent ethyl 4 g/day significantly reduced total cardiovascular events by **30%**, including:

- **25%** reduction in first cardiovascular events
- **32%** reduction in second cardiovascular events
- **31%** reduction in third cardiovascular events
- **48%** reduction in fourth or more cardiovascular events

Analysis of first, recurrent, and total events demonstrates the large burden of ischemic events in statin-treated patients with baseline triglycerides > ~100 mg/dL and the potential role of icosapent ethyl in reducing this residual risk

Bhatt DL et al. *J Am Coll Cardiol*. 2019;Mar 18(Epub ahead of print). Bhatt DL. ACC 2019, New Orleans.

Update to ADA Standards of Medical Care in Diabetes–2019.
Annotation published March 27, 2019.

Treatment of Other Lipoprotein Fractions or Targets:

In patients with ASCVD or other cardiac risk factors on a statin with controlled LDL-C, but elevated triglycerides (135-499), the addition of icosapent ethyl should be considered to reduce cardiovascular risk. A

“It should be noted that data are lacking with other omega-3 fatty acids, and results of the REDUCE-IT trial should not be extrapolated to other products."

Conclusion

- Inflammation, oxidative stress and endothelial dysfunction are causally related to atherosclerosis;

- Omega-3 FA (EPA) interferes with mechanisms of atherosclerosis at therapeutic concentrations as compared to other TG-lowering agents or omega-3 FA formulations. This may contribute to clinical benefits as seen in REDUCE-IT;

- Dietary supplements are not an appropriate substitute for FDA-approved and tested omega-3 fatty acids in patients.
