

## Getting the Facts on Your Fertility

Testing for both of you

*ReproSource*<sup>®</sup>  
ILLUMINATING PATHWAYS TO REPRODUCTIVE HEALTH™

## Testing can help you find answers

Whether you are currently having trouble conceiving, or you are simply planning for a future pregnancy, diagnostic testing from ReproSource can help you make informed decisions about your next steps.

Egg supply testing for her and semen testing for him are among the first steps to take to begin the process of identifying causes of infertility and determining your fertility potential.

**Our Ovarian Assessment Report (OAR™) for women and the @Home Collection for semen analysis for men will help you and your clinician determine your path forward.**

Ask your OB-GYN today about  
the Ovarian Assessment  
Report and the @Home  
Collection for semen analysis

# For Her

Establishing a successful pregnancy depends on multiple factors from both the woman and man. **Her egg supply** is one very critical factor for determining a woman's overall fertility potential. Now, egg supply can be easily assessed with a reliable test, the Ovarian Assessment Report (OAR).

## The Ovarian Assessment Report (OAR)

### What is the OAR?

The Ovarian Assessment Report (OAR) provides a highly accurate assessment of a woman's ovulatory egg supply. The OAR measures multiple egg supply related hormones and integrates these values with your age using advanced mathematics to create an egg supply score. If you are currently struggling with infertility, your egg supply score can help determine if your egg supply may be a part of your struggle.

### Specimen collection

#### How is the specimen collected and what do the results mean?

A small blood sample will be collected either day 2, 3, or 4 of your menstrual period. Your blood specimen is then sent to our lab for analysis. ReproSource, a highly specialized fertility laboratory, will analyze your specimen and create a customized Ovarian Assessment Report just for you. The 4-page report will be mailed to your clinician so that they can review the results with you and answer any questions you may have.

### Testing costs

#### What will my out-of-pocket responsibility be?

ReproSource can submit testing charges to most commercial insurance payers. To find out more about your billing options for the OAR, call ReproSource Client Services at 1.800.667.8893 (press 1).

# For Him

**40%** of infertility cases are due to male reproductive issues

## @Home Collection for semen analysis

### What is @Home Collection for semen analysis?

@Home Collection is a comprehensive and unique way to provide information on sperm health. The test results indicate the number of sperm, how well they are moving (motility), and how the sperm are shaped (morphology).

## Where is the analysis done?

ReproSource is a Center of Excellence for clinical reproductive health testing that is trusted by urologists and fertility specialists. Our lab is certified by CLIA<sup>1</sup>, the governing body of lab testing, CAP-accredited<sup>2</sup>, and recognized by doctors, hospitals, and healthcare clinics nationwide. All specimens are tested and analyzed by expertly trained andrologists to ensure the highest quality standards for your testing.

## Specimen collection

### How is the @Home Collection specimen obtained?

ReproSource offers a convenient process that allows you to collect and ship your specimen from comfort of your home. Your ReproSource patient advocate will provide you with training on the process, and will answer any questions you may have about collecting and shipping your specimen.

## Testing costs

### What will my out-of-pocket responsibility be?

ReproSource can submit testing charges to most commercial insurance payers. To find out more about your billing options for the @Home Collection for semen analysis, call ReproSource Client Services at 1.800.667.8893 (press 1).

## How do I get started?

Talk to your OB-GYN to begin your reproductive journey today.
